About me

First of all, I'm a front-end developer and my primary language is JavaScript. I like working with React, Redux, Webpack and other bleeding edge technologies. I like trying something new (and it could be everything) like mobX for JS, goLang, c#, docker etc. I have enough experience with backend development and I can work with it (NodeJs, python, c#) when it's necessary, but frontend development for me is more interesting. Also I like tasks about setting up an environment, e.g. write a config for webpack, write scripts for deployment of web code, etc.

Skills

React Redux JavaScript Webpack REST HTML5/CSS3 Agile/scrum GIT SASS
Atlassian stack (jira/confluence/stash/bitbucket)

Experience

Senior Front-end Developer Jul 2017 - Present

DataArt, Saint-Petersburg

Projects:

- **Web platform for Real Estate Market (USA)**
Technologies: React+Redux, redux-form, backbone.js, recompose, lodash, sass, jest, python2+django.

I worked with team from customer side to make their team stronger and help with migrating their site from backbone to react+redux. This position was a front-end developer with basic knowledge of python+django.

- **Treatments Research System (USA)**
Technologies: React+Redux, Websocket (STOMP), Handsontable, recompose, ramda.js, sass, jest.

I was performing / responsible for the following tasks:

- Web application development;
- Creating React UI components;
- Adapting “handsontable” for react, simultaneous editing, custom renderers and editors;
- Performance tuning.
